

This page is a discussion page showing different users' posts and this page allows user to upload post. I think the background colour and the user's post background colour don't have contrast. Because I want to emphasize the text in this page, I think I need to change those colours. Other than that, I think it looks okay.

miro

This page is showing user's post in detail. It shows full text and other user's comments. As previous page, I want to change the text field colour because it doesn't emphasize user's post. Our group might need to find colour palette that can give contrast effect.
