Welcome to my site!

Shrimp is the fruit of the sea. You can barbecue it, boil it, broil it, bake it, saute it. There's shrimp-kabobs, shrimp creole, shrimp gumbo. Pan fried, deep fried, stir-fried. There's pineapple shrimp, lemon shrimp, coconut shrimp, pepper shrimp, shrimp soup, shrimp stew, shrimp salad, shrimp and potatoes, shrimp burger, shrimp sandwich. That, that's about it.

Design Report: McNinchi Design Group, LLC

These layouts correspond to the "saved palettes" page and "site preview" page. The saved palettes page would show all the user's saved color palettes, and give them options to generate a site preview, edit, or delete the saved entry. I tried to keep the layout simple, as per our interview and survey results. I went through some accessibility checks for text to make sure things are able to go well with each other. I think I could've included a bit more color to this page, as it looks a bit flat to me. Looking at it now a colored navbar would give it more depth.

For the second page, it is the site preview page, On this page, the user generates a mock site based on the colors they chose from the palette. Like the previous screen, I think I kept it pretty simple and made sure the buttons are clear. However, there are some improvements that can be made. The overall site only contains solid colors, so maybe more background artifacts like SVG waves or gradients will make the site a bit less plain. Also, having a more defined border around the site preview would be something to work on, so it makes it more clear that the space is for the preview. Lastly, I think the navbar just looks a bit too crowded and could fix that with drop-down menus?
